HalaJob API Reference

Generated from the live route inventory and backend API markdown reference.

Generated: 2026-06-28 08:05:25 UTC

Source commit: 25bced580508

Route Verification Summary

Raw Express endpoint entries: 2154

Unique method/path endpoints: 3401

Endpoints with detected auth/role guard: 3310

Known public/system endpoints: 89

Unguarded endpoints needing manual classification: 2

Reading Notes

This PDF is a generated handover copy of docs/api/HALAJOB_API_REFERENCE.md. For machine-readable integration, use HALAJOB_OPENAPI.yaml and the Postman collection.

HalaJob API Reference

Generated: 2026-06-28T08:05:05.271Z

Source: `docs/api/HALAJOB_ROUTE_INVENTORY.json`.

This is a route-level API reference skeleton. It documents the live Express route surface, authentication classification, and guard evidence. Detailed request bodies, response examples, validation schemas, audit events, and business rules still need to be filled route-by-route before the backend can be called fully documented.

Global Conventions

```
| Item | Current rule |
|---|---|
| Authentication | `Authorization: Bearer <token>` for protected routes. |
| Language | Preserve legacy `lan`; migrate clients toward `x-lang: en|ar`. |
| Content type | JSON by default; multipart for uploads. |
| IDs | MongoDB ObjectId strings unless otherwise documented. |
| Response envelope | Mixed legacy envelopes exist. New routes should standardize message/error keys without breaking
old clients. |
| Full inventory | `docs/api/HALAJOB_ROUTE_INVENTORY.json` |
| OpenAPI skeleton | `docs/api/HALAJOB_OPENAPI.yaml` |
| Postman collection | `docs/api/HALAJOB_POSTMAN_COLLECTION.json` |
```
